

Sustainability, also defined as 'development that meets the needs of the present without compromising the ability of future generations to meet their own needs'. Our company does her utmost best to contribute to this important matter. We strictly monitor and revise the various processes within our organization. Every step that is made is set to optimise the efficiency of our products and to limit our footprint to the environment. The use of energy, raw materials and natural resources is minimized, resulting in less waste. Discharged waste is separated and where possible, recyclable materials are used.

Durable, energy efficient system

We make the biggest contribution via our durable, energy efficient liniLED® System. By using the latest technologies and innovations, our R&D department is continuously improving (the efficiency) of our products. We also offer the liniLED® Lighting Control System, an intelligent network based lighting control solution. This system allows you to use the exact right amount of light, when and where it's needed. Thus, unnecessary energy is no longer wasted.

Read more about the benefits of the liniLED® Lighting Control System.

Kill two birds with one stone by investing in energy efficient light technologies. Not only do you contribute to save our earth, but you also realise substantial savings (guaranteed ROI). It's a win-win situation for both our economy and planet.

Did you know..

- The energy consumption could be reduced by more than 50% if all light bulbs are replaced by LED?
- It is expected that within 10 years the amount of light points has increased with more than 30%, due to population growth, urbanisation and rise in middle class?
- As a result of these global trends, the demand for energy rises with 2.9% per year?
- Our society only makes efficiency improvements of 1.5% per year?
- If these efficiency improvements would be doubled (3%), high economical benefits would be unlocked?

Conclusion

Our society is still not fully aware of the many benefits of LED lighting. In order to continue providing our future generations, the natural resource depletion must be minimised. The world needs smart, sustainable and energy efficient light technologies. We gladly contribute with our liniLED® System.
